

BADR FENNI

Full-Stack Software Engineer

Email: badrfny.dev@gmail.com | Languages: Arabic (Native), English (Professional Working Proficiency)

PROFESSIONAL SUMMARY

Self-taught Full-Stack Developer who began coding independently from home before formalizing his skills through YouCode's intensive, project-based training, combining strong technical discipline with sharp analytical problem-solving and a drive to ship resilient, production-grade software fast. Proficient across the Java Spring Boot, PHP/Laravel, and JavaScript/React ecosystems, with hands-on experience architecting and deploying full-stack systems—from RBAC and secure payment processing to real-time data tracking—spanning healthcare, e-commerce, and digital agency platforms. Comfortable working in small, fast-moving teams under real deadlines, translating ambiguous requirements into clean, scalable architecture. Professionally fluent in English and eager to bring intellectual curiosity, autonomy, and engineering rigor to a high-performance technology team building tools for finance.

TECHNICAL SKILLS

Frontend: JavaScript, React, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend: Java Spring Boot, PHP, Laravel, Node.js, REST APIs, Maven, JPA/Hibernate

Databases: SQL, MySQL, SQL Server

Tools & DevOps: Git, GitHub, GitLab

PROFESSIONAL EXPERIENCE

Full-Stack Developer — YouCode Labs

October 2025 – Present

- Worked within small, agile, cross-functional teams to design, architect, and deploy production-grade software under real project constraints and short delivery cycles.
- Translated ambiguous requirements into clean, maintainable full-stack architectures spanning relational databases, REST APIs, and modern component-based front ends, with an emphasis on data integrity and system reliability.
- Applied UI/UX best practices and modern design systems (Tailwind CSS) to deliver visually polished, user-centric interfaces across every project.
- Practiced version control and collaborative development workflows using Git, GitHub, and GitLab throughout the software development lifecycle.

KEY PROJECTS

MediCare — Medical Data Management Application

- Engineered a comprehensive medical data-management system, designing the relational schema and REST API layer to streamline patient record management and doctor appointment scheduling.
- Built an advanced administrative dashboard providing real-time visibility into patient data and clinical workflows.

Tech Stack: Java Spring Boot, React, SQL, Tailwind CSS

Glordia Media — Digital Agency Platform

- Co-developed a creative, multi-module platform integrating a public landing page, an administrative dashboard, a secure client portal, and a structured internal team workspace.
- Architected modular front-end components to ensure a consistent, brand-aligned visual identity across all platform modules.

Tech Stack: React, Node.js, Tailwind CSS, SQL

LocalMart — E-Commerce Marketplace

- Developed a collaborative multi-vendor marketplace featuring complex Role-Based Access Control (RBAC), real-time inventory tracking across concurrent vendor updates, and integrated secure Stripe payment processing.
- Implemented secure transaction workflows and permission-based access layers to safeguard vendor and customer data.

Tech Stack: PHP, Laravel, Tailwind CSS, MySQL, JavaScript

HamburgCar — Vehicle Rental Platform

- Designed a dynamic vehicle booking engine with automated rental contract generation to reduce manual administrative overhead.
- Optimized local SEO structures to improve platform discoverability and organic search visibility.

Tech Stack: PHP, Laravel, SQL, JavaScript, Tailwind CSS

EDUCATION & TRAINING

Advanced Full-Stack Web Development Training — YouCode

October 2025 – Present

Baccalaureate Qualification

Completed 2024
